

What is in one sound?

Actual generated examples · 20-ms candidate tones · 10-ms onset step · 40-ms background tones

YES stimulus: the same seven-tone pattern recurs eight times

NO stimulus: matching candidate tones scattered across the scene

Colored bars identify candidate tones for illustration only; colors do not indicate louder tones.

Matched tone counts and durations per frequency. Background realizations differ. The listener hears one scene per trial.
