

The seven overlap conditions

One recurrence, enlarged · Same example frequency set and order · Background omitted

Horizontal bar length = tone duration. Horizontal displacement = onset step. Order is arbitrary, not necessarily rising.

What changes?

Candidate duration: 20 or 40 ms

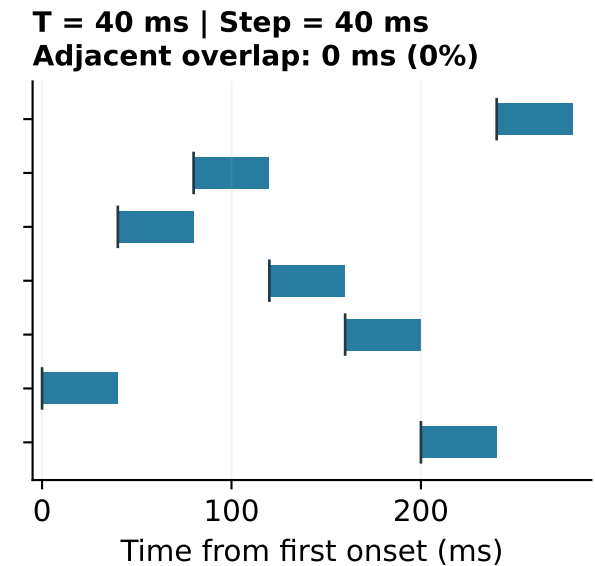

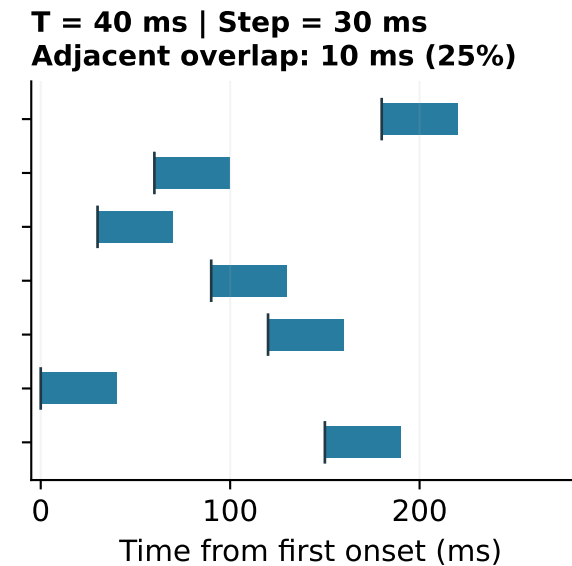

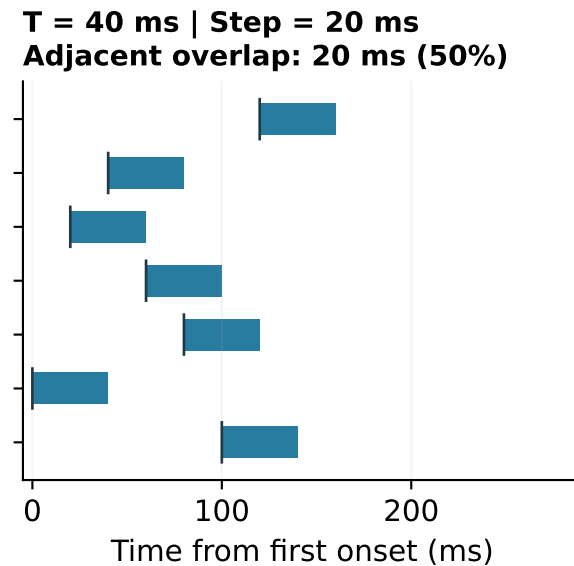

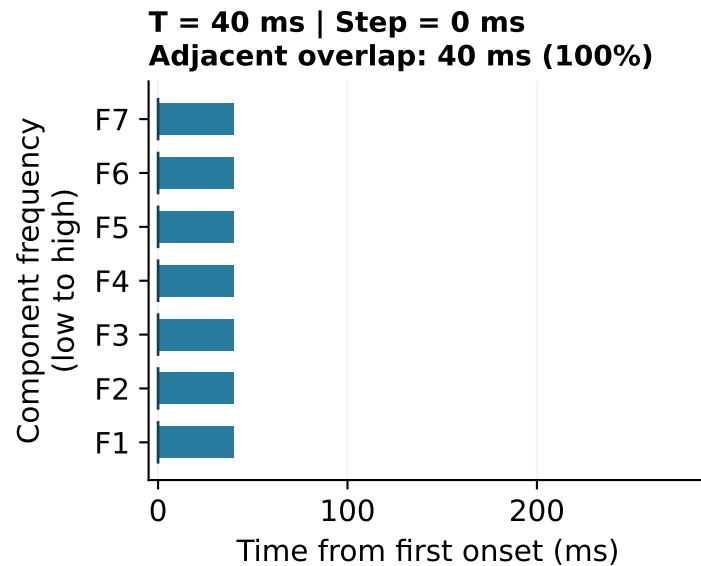

Onset step: 0-40 ms

What stays fixed?

Background duration: 40 ms

Seven components

Eight recurrences

“Adjacent” means consecutive in onset order. All seven tones overlap together only in the two synchronous conditions.

Bars show nominal duration; each tone has 5-ms onset and offset ramps. Zero overlap means touching tones, not a positive gap.
